

SafeVite

A daily multivitamin supporting wellness during and after cancer treatment.

**ONCOLOGIST
APPROVED**

Multivitamins focusing on cancer patients are not currently available, leaving cancer professionals and patients with no appropriate choice.

Recommend with Confidence

Researched and approved by our team of oncologists and oncology-focused pharmacists to not interfere with treatment while considering appropriate vitamins and doses.

SafeVite has created the solution by addressing the appropriate vitamins and doses specific to a cancer patient's needs, the first of its kind.

Description

SafeVite is an affordable daily supplement that contains specific vitamins while avoiding or limiting others. Certain vitamin types are best avoided during radiation therapy or chemotherapy and the majority of these same vitamins haven't been proven to be beneficial to the patient or survivor even when not on treatment. Additionally, our references suggest that certain vitamins are clearly deficient in many cancers. Although supplements should be used at or near the recommended daily allowances, when it comes to cancer, treatments or treatment toxicities; a specific vitamin dose may be increased while other doses best limited or even avoided. The use of vitamins is extremely prevalent in our patient population where over supplementation is common. These patients expect that in addition to directing their treatment and/or surgery, as doctors, we should convey and recommend what is most reasonable. Now there is a product specific to your patients' needs, you can confidently recommend SafeVite as your preferred supplement.

Details

1. What causes the problem, that is specific to cancer patients?

- Chemo, radiation and cancer.
- Patients who supplement with vitamins over the counter almost always ingest vitamins that may interfere with treatment.

2. What does it do?

- D deficiency is widespread and frequently seen in patients.
- B6 (pyridoxine) – Likely protects or mitigates the nerve damage by chemotherapeutic agents and possibly targeted agents that are often used to treat lymphoma, breast, colon, lung, sarcoma and myeloma (and other cancers). B6 is associated with lower risk of hormone positive breast cancer as well as helpful in colon and pancreatic cancer.
- B12 is deficient in many types of cancer including breast and multiple myeloma. B12 deficiency often results from deficiency of the protein intrinsic factor produced by the parietal cell in the stomach and thus frequently present in cancer patients and likely requires a very high dose in order to be absorbed by passive diffusion. B12 based on homocysteine alternations likely mitigates bone turnover and bone fracture risk.

3. Are we avoiding any ingredients?

- Zinc – Though zinc can specifically help with taste alterations due to radiation damage in oral cavity; it could mitigate the curative effects of this treatment. This is currently still being studied. For now, likely best to avoid since its known benefits are limited to this specific situation and its known to lead to copper deficiency.
- E & A – Vitamins E and A, beta-carotene and selenium tend to interfere with potentially curative chemotherapy and radiation treatments while evidence supports the vitamins not being helpful in cancer prevention or possibly harmful when it comes to cancers like lung or prostate.

4. Are we controlling any doses?

- B6
- B12

Ingredients

All ingredients researched to be non-carcinogenic.

- Vitamin D (as cholecalciferol) 1000 IU
- Thiamin (as thiamin HCl) 0.75 mg
- Riboflavin 3.4 mg
- Niacin 30 mg
- Vitamin B6 (as pyridoxine HCl) 8 mg
- Vitamin B12 (as cyanocobalamin) 1,000 mcg
- Biotin 60 mcg
- Pantothenic acid (as D-calcium pantothenate) 10 mg
- Magnesium (as magnesium oxide) 350 mg
- Copper (as copper gluconate) 0.9 mg
- Chromium (as chromium dinicotinate glycinate) 120 mcg
- Molybdenum (as sodium molybdate) 45 mcg

Discussion

Have you considered the non-pharmaceutical aspects of your patients' treatment? Most physicians don't have time to research the thousands of supplemental products available today. Many patients are concerned about whether they are doing everything possible to assist in their wellness. They research it themselves on the internet and ask friends and family for advice in choosing supplements. This process may be detrimental or interfere with their treatment protocol.

4CancerWellness's team of oncologists and oncology-focused pharmacists research each supplement carefully, ensuring that they will not interfere with treatment or recovery. Doctors and nurses can therefore recommend 4CancerWellness supplements to their patients with confidence. Patients will also feel reassured knowing that their supplements were recommended by their doctor, increasing good will towards the practice.

Business with 4-Wellness LLC

4CancerWellness branded product line provides:

- Marketing materials designed for patients.
- Easy ordering and fulfillment process.
- An excellent compensation package for practices and networks.

White label branded product line provides:

- Full service white label branding to your practice or network at a below average cost (branded to your companies identity).
- Easy ordering and fulfillment process.
- An excellent compensation package for practices and networks.
